INDEX.

Adie, R., Esq., of Liverpool, his account of experiments with thermo- and hydro-electrical currents, with an examination of the metals exposed to thermo-electrical action, 346.
Agassiz, Louis, Dr, a period in the history of our planet, 1.
——— Report, by M. E. Desor, of his, Mr Agassiz', late researches on glaciers, 290.
Ancient sea-levels, lines of, 121.
Artesian wells considered, by Admiral Sir David Milne, 79.
Arts, decorative, observations on, by C. H. Wilson, Esq., 259.
Arts, Royal Scottish Society of, its Proceedings, 377.
Avanturine-glass, composition of, by Professor F. Wöhler, 313.
Aurora Borealis, observations on the, in Norway, 384.

Balfour, Edward, Assistant-Surgeon, H.E.I.C.S., on the migratory tribes of natives in Central India, 29.
Barbadoes, observations on its temperature and hygrometric state, by Robert Lawson, Esq., assistant-surgeon 47th regiment, 57.
Barry, Martin, Dr, on fissiparous generation, 205.—The cells in the ovum compared with the corpuscles of the blood, &c., 320.
Beaches, raised, observed in Scotland, some account of, 278.
Bivalve molluscous animals, considerations regarding their comparative normal position, by M. Alcide D'Orbigny, 162.
Buch, Baron von, on the forms assumed by granite and gneiss at the surface of the earth, 316.
Buckley, S. B., A.M., notice of the discovery of a nearly complete skeleton of the Zygodon of Owen, in Alabama, United States, America, 77.

Carpenter, W. M., Professor, on the methods in common use of obtaining the mean temperature of places, &c., 53.
Cavern, freezing, at Orenburg, its phenomena explained by Dr Hope, 191.
Cirripeds, their sexes, organs of reproduction, and mode of development considered, by H. D. S. Goodsir, Esq., 88.
Coal, theory of its formation; American and European evidence compared, 117.

Comparative level of lakes and seas, as the Caspian, Lake Aral, Black Sea, Red Sea, Mediterranean, Lake Tiberias, Dead Sea, Atlantic, Pacific, &c., by Baron Humboldt, 323.
Connell, Arthur, Professor, on the chemical constitution of Philipsite, or lime harmotome, 374.
Corals, their distribution as limited by temperature, 340.—Areas of subsidence in the Pacific as indicated by the distribution of coral islands, 341.

Daylight, continued, within the Arctic Circle, 190.
Daubeny, Dr, F.R.S., &c., on the quantity of salt in sea-water, as determined by the examination of specimens collected in a voyage from Southampton to New York, 65.
——— Examination of specimens of sea-water, collected from different localities, 66.
Desor, M. E., his report of the researches of M. Agassiz during his last two sojourns at the Hotel-des-Neuchâtelois, upon the lower glacier of the Aar, in the years 1841 and 1842, 166, 290.
Diorama, a portable one, further observations on, described by Mr Tait, 53.
D'Orbigny, Alcide, his observations on the comparative normal position of bivalve molluscous animals, 162.—On the palæontology of South America, 362.

Earthquake-shocks, notices of, felt in Great Britain, and especially in Scotland, with inferences suggested by these notices as to the causes of the shocks, by David Milne, Esq., F.R.S.E., &c., 137.
Edentata, order of, summary of its extinct and living species, by Professor Owen, 353.

Forbes, James, Professor, attempt to explain the leading phenomena of glaciers, 221.

Generation of the Polygastric Infusoria, observations on, 185—fissiparous, observations on, 205.
Geological Society of London, its chief aim, 135.
Geology of the island of Little Ross, Kirkcudbrightshire, described by Thomas Stevenson, Esq., civil-engineer, 83.
Glacier, Lower, of the Aar, described by Desor from Agassiz, 166, 290.
Glaciers, the leading phenomena thereof, explained by Professor Forbes, 221.
———, Mr Hopkins on the cause of their motion, 386.
———, their agency in transporting blocks, 389.
Glow-worm, the cause of its light, 395.
Goodsir, H. D. S. Esq., on the sexes, organs of reproduction, and

mode of development, of the Cirripeds, &c. 88—on the genus Cetochilus, &c. 336.
Granite, on the forms it assumes at the surface of the earth, 316.

Hamilton, Sir William, Bart., his historical notices in regard to the distinction of nerves and nervous filaments into motive and sensitive; and in regard to the peculiarity of function, and absolute isolation of the ultimate nervous filaments, 67.
Hares, identity of Irish and Alpine, 397.
Harmotome (lime), or Philipsite, its chemical constitution considered, by Professor Connell, 375.
Hematozoary animals in the blood of a dog, 393.
Hope, D. T,, Esq., on wood-paving, 252.
Hope, J. C., Dr., his attempt to explain the phenomena of the freezing cavern of Orenburg, 191.
Hopkins, Mr, on glacier motion, 386.—On erratic blocks, 388.
Humboldt, Alexander, Baron, on the comparative level of lakes and seas, 323.

Infusoria, polygastric, their mode of generation, 185.

Johnston, James, Esq., experiments on the explosive force of oxygen and hydrogen gases, 160.

Lakes and seas, their levels considered by Baron Humboldt, 323.
Lawson, Robert, assistant-surgeon 47th Regiment, on the temperature and hygrometric state of the atmosphere of the Island of Barbadoes, 57.

Maclaren, Charles, Esq., F.R.S.E., his remarks on natural terraces or raised beaches observed in the course of the river Tay, 278.
Magdalena Bay in Spitzbergen, described, 195.
Mastodontoid and Megatherioid animals, observations on, 129.
Maxton, John, F.R.S.S.A., description of a self-acting stopper, 51.
——— John, description of improved long slide-valve for condensing engines, 361.
Mean temperature of places, methods of determining, by Professor W. M. Carpenter, 53.
Meteorological tables for 1843, 178.
Milne, Admiral Sir David, on artesian wells, 79.
——— David, Esq., F.R.S.E., on earthquake shocks, &c., 137.
Mitchell's improved water-meter described, 48.
Murchison, R. J., Esq., observations on Permian system of rocks. Theory of the origin of coal. Lines of ancient sea-levels. On Mastodontoidal animals; and on the aim of the Geological So-

ciety of London, 115.—On the Permian system in Germany, &c., 390.
Owen, Professor, on the generation of the Polygastric Infusoria, 185. —On the living and fossil species of the order Edentata, 353.

Patents for inventions granted for Scotland, from 23d March to 23d June 1843 inclusive, 202,—and from 23d June to 23d September, 401.
Paving, wood, observations on, by T. D. Hope, Esq., 252.
Phosphorescence, a new kind, observed among certain Annleides and Ophiuridæ, by M. Quatrefages, 104.
Publications, new, received, 199, 397.

Quatrefages, M., on a new kind of phosphorescence, 104.

Raised beaches or natural terraces in the course of the Tay described, 278.

Scandinavia, on the rise of its coast, 392.
Sea-water, the quantity of saline matter contained in it, by Dr Daubeny, 65.
————, specimens of, from different localities, examined by Dr Daubeny, 66.
Seasons of Demerara and Essequibo, 194.
Sigillaria, Stigmaria, and Neuropteris, observations on, by Mr King, of Newcastle, 372.
Skin, the, its structure in the different races of man, 396.
Subsidence, areas of, in the Pacific, as indicated by the distribution of coral islands, by James D. Dana, Esq., 341.

Tartar, examination of, 395.
Tay, river, its natural terraces described, 278.

Waves of the sea, experiments on, with the view of verifying the property ascribed to oil of calming them, 112.
Wilson, C. H., Esq., on some of the decorative arts in Germany and France, 259.
Wöhler, F., Professor, on the composition of avanturine-glass, 313.
Wood-paving, observations on, by D. T. Hope, 252.

PRINTED BY NEILL AND CO., EDINBURGH.
